//note="Vector: pBluescript SK-; Site 1: EcoRI; Site 2:
XhoI; cDNA was prepared from polyA+ enriched RNA. The cDNA
was directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in SOLR cells."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Arabidopsis Arabidopsis A. thaliana

transc thalia Produc

XEEE

New isolated polynucleotide derived from tomato, useful for producing an Anthocyanin 1 phenotype in plants, particularly for modifying e.g. leaf color, flower color or fruit color in plants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents tomato anthocyanin 1 (ANT1). The ANT1 polynucleotide can be used for modifying the expression of a native plant gene, particularly for producing an anthocyanin 1 phenotype in plants, which is responsible for many red and blue colours in plants. The polynucleotide is useful for modifying e.g. leaf colour, flower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Transcription factor; trait modification; structural characteristic; developmental c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAE01932 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    characteristics of plants, e.g., corn, potato and cotton plants, when their expression level is altered. Specifically, they are used for modifying the nutritional content of plants or seeds, e.g., to modify vitamin and mineral content, to modify the oil content of seeds, to modify the insoluble sugar content of seeds, to modify phremyl lipid content, to modify fatty acid and modify wax content. They may also be used to alter seed characteristics such as shelf-life, size, stress tolerance, seedling vigour, pest and pathogen resistance and germination rate. They may also be used in gene therapy. Therefore manipulating transcription factor levels in plants offers great potential in agricultural biotechnology for modifying a plant's traits.

                                                                                Ś
                                                                                                                                                                                                 are a transgenic plant comprising the polynucleotides, a computer readable medium having stored sequence information, and identifying a common composition of the polynucleotides are computed in the polynucleotide is sequence information selected from plant sequences comprising inputting sequence information selected from one of 464 fully defined sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a composition of the polynucleotide or antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified production of agriculturally useful proteins or metabolic chemicals, pest tolerance, herbicide resistance, seed and fruit yield, growth disease resistance, herbicide resistance, seed and fruit yield, growth rate, leaf and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 proteins which are
                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                  Arabidopsis thaliana production of anthocyanin pigment (PAP) genes PAF or PAP2. The genes for both PAP1 and PAP2 have been mapped to chromoso 1. PAP1 and PAP2 are MYB-like transcription factors that regulate the production of anthocyanin pigment. The nucleotide sequence of the invention is useful for screening for PAP gene expression, it is also useful for detecting promoter activity within a plant cell. The nucleotide sequence is also useful for screening for PAP gene expression. At thaliana) transformation. The transformed plant cells are then used to produce transgenic plants with tissue-specific altered colour expression. The nucleotide sequence is also useful for enhancing accumulation of phenylpropanoid product in a plant. A transgenic plant is useful for detecting a stress condition such as light appears a stress that it is useful for enhancing than the plant is useful for enhancing accumulation of phenylpropanoid product in a plant. A transgenic plant is useful for detecting a stress condition such as light appears to the product of the plant of t
                                                                                                                                                                                                                                                        stress, water stress, pH stress, temperature stress, heavy metal stress, pathogen attack or infection, wounding, nutrient deficiency, herbivory, or abnormal hormone levels in a plant. PAP1 or PAP2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated PAP1 or PAP2 gene, useful for increasing pigmentation in plants, as reporter genes for analysing expression pattern of promoter of interest, and to increase flux through phenylpropanoid pathway
                                          plants to respond more quickly to a stress condition in ways that are physiologically significant, as well as in ways of ornamental
                                                                                             colouration in ornamental plants for commercial sates, and to screes. Introduction of PAP1 or PAP2 sensitises sensitising plants to stress. Introduction of PAP1 or paper sensitises
                                                                                                                                                                        overexpression can also be useful in developing or enhancing d colouration in ornamental plants for commercial sales, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to the nucleotide and protein sequences of novel Arabidopsis thaliana production of anthocyanin pigment (PAP) genes PAPI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 9; Page 26-27; 29pp; English

            The present sequence represents a plant stress tolerance-related myloblastosis (MYB) transcription factor. The specification describes AtmYB60, AtmYB76, AtmYB75 and AtmYB90. MYB polypeptides are useful for enhancing a plant's tolerance or sensitivity to stress e.g. salt, drought, cold and heat tolerance. It is also useful for producing a

They may also be used to alter seed characteristics such as shelf-life, size, stress tolerance, seedling vigour, pest and pathogen resistance and germination rate. They may also be used in gene therapy. Therefore manipulating transcription factor levels in plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    plants or seeds, e.g., to modify vitamin and mineral content, to modify the oil content of seeds, to modify the insoluble sugar content of seeds, to modify phrenyl lipid content, to modify fatty acid and modify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is Arabidopsis thaliana transcription factor The transcription factors may be used to modify traits associated with structural or developmental characteristics of plants, e.g. potato and cotton plants, when their expression level is altered.

cc complements, fragments, or related polynucleotide with 31% to 95% cc sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant trait as compared cc phenotype as compared to a wild-type or reference plant, or the plant or the plant or the plant can altered trait as compared to a wild-type or reference plant, or the plant or the plant cc are a transgenic plant trait as compared to a wild plant. Also included are a transgenic plant comprising the polynucleotides, a computer comprising inputting sequence information, and identifying a comprising inputting sequence information, and identifying a comprising inputting sequence information. The isolated or recombinant polynucleotide is used for producing a plant having a comprising a polynucleotide trait, the method comprising selecting a polynucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the polynucleotide or polynucleotide or antisense nucleic acid into an expression vector, into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified comprising for a modified trait (e.g. increased plant, microbial comprising as response (e.g. drought), microbial codisease resistance, herbicide constitutions (e.g. drought), microbial
pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                          a Mentha sp. or Taxus sp. terpenoid pathway gene where the terpenoid pathway gene encodes limonene synthase (LS) or taxadiene synthase (TDS). It is also useful for identifying one or more transcription factors that activate one or more genes of a biological pathway of a plant, fungi or animal cell, where the biological pathway can be a biochemical pathway such as biosynthetic pathways for soluble and insoluble carbohydrates, for amino acids and a response pathway to abiotic stress such as cold, freezing, drought, heat, nutrient deficiency, pH or biotic stress such as singal, viral or bacterial infection, developmental pathway such as fingal, viral or bacterial infection, developmental pathway such as
                                                                                                                                                                                                                                                                                                                                                                                                                    a polynucleotide which encodes a transcription factor for controlling the expression of one or more genes in a pathway. The method is useful for determining whether a member of a pool of test transcription factor polynucleotides encodes a biosynthetic pathway transcription factor or a primary metabolite pathway gene or a secondary metabolite pathway gene such as a terpenoid or alkaloid pathway gene transcription factor. It is also useful for determining whether a member of a pool of test encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transcription factor; metabolite pathway; terpenoid; limonene synthase; alkaloid pathway gene; taxadiene synthase; biological pathway; freezing; abiotic stress; cold; drought; heat; nutrient deficiency; biotic stress; infection; developmental pathway; flowering; root development; TDS; LS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    production of anthocyanin pigment. The nucleotide sequence of the circumstance is useful for screening for PAP gene expression, it is also useful for detecting promoter activity within a plant cell. The nucleotide sequence is also useful for screening for plant cell (e.g., A. thaliana) transformation. The transformed plant cells are then used to produce transgenic plants with tissue-specific altered colour expression. The nucleotide sequence is also useful for enhancing caccumulation of phenylpropanoid product in a plant. A transgenic plant is useful for detecting a stress condition such as light carest, water stress, pH stress, temperature stress, heavy metal stress, pathogen attack or infection, wounding, nutrient deficiency, therefore, pathogen and bormone levels in a plant. PAP1 or PAP2 colouration in ornamental plants for commercial sales, and for colouration plants to stress. Introduction of PAP1 or PAP2 sensitises

CC associated with a plant trait as compared to a wild plant. Also included CC are a transgenic plant comprising the polynucleotides, a computer CC readable medium having stored sequence information, and identifying a CC homologue sequence from a database comprising a plurality of known plant CC 464 fully defined sequences given in the specification. The isolated or CC recombinant polynucleotide is used for producing a plant having a CC modified trait, the method comprising selecting a polynucleotide that CC encodes a polypeptide or an antisense nucleic acid, inserting the CC polynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress CC introducing the vector into a plant or a cell of a plant to overexpress CC plant, and selecting for a modified trait (e.g. increased CC plant, and selecting for a modified trait (e.g. increased CC plant, and selecting for a modified trait (e.g. increased CC plant, and selecting for a modified trait (e.g. drought), microbial CC disease resistance, herbicide resistance, seed and fruit yield, growth C ate, leaf and flower senescence and many other traits listed in the CC pecification). The present sequence is one of the 232 proteins which are CC A. thaliana transcription factors.
                                                                                                                                                                                                                                                                                                                                                                           encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim

The present sequence is homologue G2421 of Arabidopsis thaliana transcription factor G663. The transcription factors may be used to modify traits associated with structural or developmental characteristics of plants, e.g., corn, potato and cotton plants, when their expression level is altered. Specifically, they are used for modifying the nutritional content of plants or seeds, e.g., to modify vitamin and mineral content, to modify the oil content of seeds, to modify the insoluble sugar content of seeds, to modify the insoluble sugar content of seeds, to modify the oil content of seeds also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Reuber

They may also be used in gene therapy. Therefore manipulating transcription factor levels in plants offers great potential in agricultural biotechnology for modifying a plant's traits.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          are a transgenic plant comprising the polynucleotides, a computer creadable medium having stored sequence information, and identifying a computer compose sequence from a database comprising a plurality of known plant sequences comprising inputting sequence information selected from one of 46 fully defined sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a modified trait, the method comprising selecting a polynucleotide that composes a polypeptide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, inserting the polypeptide or antisense nucleic acid, thereby producing a modified plant, and selecting for a modified trait (e.g. increased plant, and selecting for a modified trait (e.g. increased plant, and selecting for a modified trait (e.g. drought), microbial composition of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial constituence, herbicide resistance, seed and fruit yield, growth rate, leaf and flower sensescence and many other traits listed in the specification. The present sequence is one of the 232 proteins which are

                                                                                                                                                                                                                                                                           The present sequence represents a plant stress tolerance-related myloblastosis (MYB) transcription factor. The specification describes AtMYB60, AtMYB764, AtMYB75 and AtMYB90. MYB polypeptides are useful for enhancing a plant's tolerance or sensitivity to stress e.g. 'Salt, drought, cold and heat tolerance. It is also useful for producing a transgenic plant with enhanced stress tolerance or stress sensitivity. MYB polypeptides are also useful for increasing the production of products of the phenylpropanoid biosynthesis pathway, e.g. stilbenes, flivenoids, lignins, salicylic acid, anthocyanins, and phenolic

The sequence was deduced from GhAYB 7 cDNA isolated from a Gossypium hirsutum cv. Acala SJ-2 10-day pre-anthesis fibre cDNA library. A claimed method of modulating transcription in a plant involves introducing into the plant a recombinant expression cassette comprising a promoter that is operably linked to a heterologous polymucleotide encoding a MYB protein, especially GhMYB 1 or GhMYB 6. The plant is especially a cotton plant, and the promoter directs expression of the polymucleotide in cotton fibres or roots. Valuable phenotypes can be conferred on the plant by this method, e.g. increased fibre quality, yield, length, strength or fineness, alteration of root architecture, and enhanced growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modulating transcription in plants for improving cotton fiber quality comprises introducing a recombinant expression cassette comprising a

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a plant having cacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic helix-loop-helix zipper, homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EREBs, zinc finger domains of type 2 Cys2His2, CCAAT box elements and MYB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            poplar; sweetgum; teak; mahogany; bZIP; G-box binding factor; basic helix-loop-helix zipper; homeotic; homeodomain; homeobox; homeodomain zipper; LIM domain; AP2; EREB8; zinc finger domain; type 2 CysHis2: CCAAT box element. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
